Troubleshooting YOU DON'T KNOW JACK

Don't know *JACK* about your computer? Here are some recommendations to perfect your YOU DON'T KNOW JACK The Ride experience.

For more in-depth information, check out the README file on the YOU DON'T KNOW JACK The Ride CD-ROM. If you're still in a jam, write or e-mail our technical support team. Contact information can be found on page 10 of this manual.

And, let's get something straight. Choosing wrong answers all the time is *your* problem.

Windows Troubleshooting

If you experience stuttering sound or video, decrease the sliding CD-ROM read-ahead cache. To change this setting, select the System Control Panel, choose the "Performance" tab and click on the "File System Properties..." button. Set the slider to "Small" and the pop-up menu to "no read-ahead."

If you experience problems with your video display, make sure that you are running in 256-color mode.

Macintosh Troubleshooting

If you are having problems installing or playing YOU DON'T KNOW JACK, try turning off all unnecessary extensions.

To play YOU DON'T KNOW JACK, you need Sound Manager 3.2.1, Sound Control Panel 8.0.5 and Apple CD-ROM (or software for your CD-ROM).

If you experience choppy sound, make sure Virtual Memory is turned off. To do this, select "Memory" from the Control Panels folder and click the "off" position in the "Virtual Memory" section. If that doesn't work, try rebuilding your desktop twice by holding down the Command and Option keys during start-up, or trashing the Sound Preferences item by dragging it from the Preferences folder in the System Folder to the Trash and emptying the trash. The Sound Preferences will rebuild itself the next time you open the Sound Control Panel.
